Working with Library Search Platforms?

HighWire January 2011 Meeting

So Many Starting Points

- Most users still arrive at a publisher's web site from another web site or a link in an email (or RSS) and not from navigating their way around the publisher's site.
- There are lots of places to start the navigation, but in aggregate, the library web sites seem to account for a lot of the traffic

Unique Role of Library Web Pages [sic]

- The only starting point with knowledge (across multiple publisher sites) of what the user is licensed to read
- Technologies heavily integrated with other starting points too
- Individually, libraries make up a tiny proportion of referrals to publisher web sites, but in aggregate they are very significant indeed

Web Scale Discovery for Primary Publishers

- Enhances discoverability of publisher content
 - Users are linked out to full text on publisher web site
- Diminishes the case for the publisher web site as a starting point

Web Scale Discovery for A&I Publishers

- Since discovery products only index the subscribed content, this must reinforce the value of the data in the index, and perhaps help guarantee the viability of the index itself
- Loss of brand – only the data, and not the starting point itself, will be seen.
 - Users link out from discovery product to full text
 - Users get only a subset of the functionality of specialist search

Web Scale Discovery for the Library

- Potentially a very powerful tool that helps cement the library's role in information discovery
- Still lots of competition!

Thank You.
